Purpose

This program demonstrates how to write a program for the course.

Requirements

| Task | Status |
|---|-------------------|
| Client and Server connect with domain socket and client makes a request and server responds | Fully implemented |
| (bonus) (if there were a bonus, it would be listed here) | Not implemented |

Platforms

This has been tested on:

- Ubuntu
- Manjaro

Language

- Python 3.12.5

Documents

- [Design](#)
- [Testing](#)
- [User Guide](#)

Findings

The client and server communicate well with UNIX domain sockets and the request and response were handled well.
